ethilog

patient safety made easy

Traceable medication all the way to the patient

One out of 5 patients receives wrong medication during his/her stay at the hospital. For one out of 4 of them this might have serious health consequences (ADE). Traceable unitdose medication reduces dispensing and administration errors in hospitals by 40%.

ethilog introduces the cardID® compact and fully traceable unitdose

The patented cardID unitdose offers full traceability (GS1, datamatrix) in a compact and easy to administer packaging without deblistering or overwrapping.

ethilog offers a full line of products and services

to transform medication into cardID unitdoses, to handle and store the unitdoses and to dispense and administer them in a secure, efficient and ergonomic way.

ethilog = simply safe

The ethilog logistics system is built around simple and safe concepts such as “pick-to-light” and “two+ bin e-kanban”. ethilog tuned these proven industrial concepts to the specific needs of the healthcare environment.

The cardID unitdose integrates easily in existing logistics systems at the hospital.

The full ethilog solution is modular and can be implemented gradually without significantly changing the hospitals workflows and organization.

This way the ethilog solution represents an affordable, adaptive and safe investment for every hospital.
